We supply various manufacturer's engineered wood products and can get almost any engineered product you may need. We will deliver these to your site in most cases within 7 days of the order. Contact us with your specification or let us compare your product through our design program to make sure it is the correct product for the job. If you want, we can design the floor or roof system for you including all the headers and beams needed for the project.

Bluegrass Truss Company has committed to purchasing the most up-to-date technology in its manufacturing equipment. We utilize reliable software for layout and engineering on each project. This system allows for a complete truss placement and load analysis while generating cutting and jigging instructions. The latest VIRTEK(Registered TM) laser technology was added to our production lines, for greater accuracy (i.e. quality control) and efficiencies allowing the company to meet customer demands and deadlines.
