Bluegrass Truss Company is a manufacturer of wall panels which are used in building panelized homes. We supply wall panels to a number of home builders in and around the state of Kentucky. We basically supply panels and all other building components we manufacture to individuals, companies, churches, health institutions, fire stations and other organizations.

Wall panels are becoming increasingly popular in the home-building industry due to a lot of advantages, some of which are listed below:

- i. Two people can easily stand most wall panels in place. This should be especially attractive to contactors with small crews.
- ii. Layouts are provided with labels indicating the exact location of the wall panels manufactured.
- iii. Since the panels are manufactured in the shop the materials used are very much controlled and guaranteed to be high quality materials.
- iv. Wall panel users will see a significant reduction in erection time and material loss which should equate to a more profitable project.
- v. Studs and headers are designed and engineered to support applied loads.
- vi. Sheathing is applied by the manufacturer (Bluegrass Truss) saving time in the field.
